SITE INVESTIGATION/CLEANUP

- Continued operation and maintenance of the vapor extraction system, located on the Wyle property near Golden West Lane. The system pulls chemical vapors from the soil through a series of underground pipes and passes them through a carbon filter to remove the contaminants. The system will help prevent chemical vapors from seeping into the homes at the southern end of Golden West Lane. The vacuum readings in monitoring probes offsite were also recorded, to determine how much air vapor the vacuum unit is pulling back onto the site.

Ongoing Remedial Investigation activities:

Last week

Onsite:

- No sampling conducted last week.

Offsite:

- Continued collecting vacuum measurements in monitoring and extraction wells associated with the extraction system, located on the Wyle property near Golden West Lane.
- Continued measuring water levels in off-site groundwater monitoring wells.

Sampling planned for this week

Onsite:

- No sampling planned for this week.

Offsite:

- Continue collecting vacuum measurements in monitoring and extraction wells associated with the extraction system, located on the Wyle property near Golden West Lane. These measurements are taken to determine how much air vapor the vacuum unit is pulling back onto the site, and will help us determine how well the system is working.
- Continue measuring water levels in off-site groundwater monitoring wells.

PUBLIC PARTICIPATION

- DTSC senior project manager Rafat Abbasi attended the Corona-Norco Unified School District board meeting. Mr. Abbasi provided an update on the Wyle project to board members.
